PRINT PLATE HANDLING

Safe. Efficient. Precise.

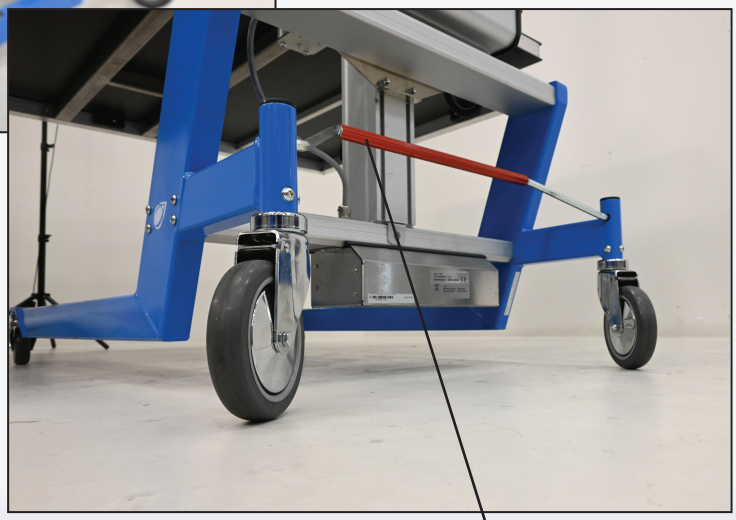

Engineered to make print plate handling easier, safer and more efficient. Our **LIFT-O-FLEX®** solutions provide smooth, controlled movement for lifting, rotating, and positioning print plates throughout the workflow. Durable, easy-to-clean surfaces and ergonomic controls help protect valuable plates, reduce operator strain and improve productivity in flexographic printing operations.

PRINT SLEEVE HANDLING

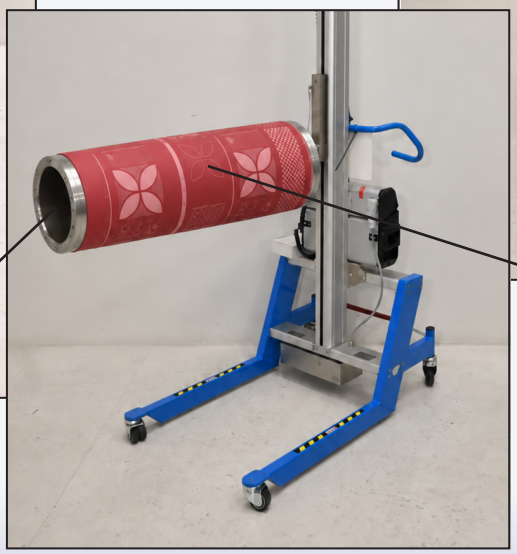

Lift. Rotate. Position.

Our **LIFT-O-FLEX®** solutions make print sleeve handling safer and more efficient. Designed to lift, rotate and position cylindrical sleeves with precision, these lifters help prevent damage to valuable sleeves while reducing operator strain. Durable easy-to-clean surfaces and ergonomic controls provide smooth, controlled movement throughout your flexographic printing workflow.

KEY FEATURES

- Outer Core Handling
- Protective Gripper Pads
- Vertical Sleeve Handling
- Horizontal Sleeve Handling
- Inner Core Handling

ENGINEERED FOR FLEXOGRAPHIC WORKFLOWS

From delicate print plates to cylindrical print sleeves, LIFT-O-FLEX® solutions are engineered around the specific handling requirements of your process. Custom tooling, controlled movement and ergonomic operation help improve handling consistency while protecting valuable materials and supporting the operator.

APPLICATION BENEFITS

- Helps reduce manual lifting and handling
- Helps protect print plates and sleeves from damage
- Supports controlled positioning between process steps
- Improves operator ergonomics
- Standard & custom tooling designed around the application
- Mobile design supports movement throughout the facility

Easy Maneuverability

STANDARD SOLUTIONS

- 30 years of material handling experience
- Proven flexographic solutions, including equipment engineered for the DuPont™ Cyrel® plate-making process
- Reliable LIFT-O-FLEX® designs built for ergonomic, repeatable handling

CUSTOM SOLUTIONS

- Load weight and dimensions
- Plate or sleeve size
- Required lift height
- Horizontal or vertical orientation
- Rotation requirements
- Pickup and placement locations
- Facility and workflow constraints
