EXPAND-O-TURN™ LIGHT

Designed for the ergonomic handling of smaller rolls and reels

Manual Operation =

- ✓ **Affordable Pricing**
- ✓ **Low Maintenance**
- ✓ **Easy Installation**

The Expand-O-Turn Light™ is a perfect ergonomic solution for handling smaller rolls and reels. The roll is gripped by the core with an expander block locking the reel to the axle by the own weight of the roll. The lifting motion is achieved with the hand-held pendant remote control attached to the lifter itself. The roll is then rotated from vertical to horizontal position or vice versa for transferral to a machine or other equipment. Rotation is simple and effortless due to the built-in gas spring. The expander can be set in one of two modes. The first

mode is called the “active” mode and is used when lifting and rotating. The second mode is called “inactive” mode and is used when unloading the roll. The Expand-O-Turn Light™ is designed to handle rolls of different types but it is limited to 3-inch cores. The maximum load for this attachment is determined by what type of lifter it is mounted to, the roll specifications, and the manner used to lift the roll. The maximum allowable load for this tool remains at 88 pounds. Contact us today to discuss your application needs and requirements.
