

LIFT-O-FLEX®

By

RonI

Standard 40" x 42" x 5.5" High Workstation Pallet Shown with 40" Ø Turntable with Manually Activated Locking Detents at 90°

Lifter Interface Shown for Load Pick Up

Aluminum Workstation Pallet with Turntable is used to allow LIFT-O-FLEX® ergonomic lifter leg access for loading or unloading of shipper pallets. Simply place your shipper pallet on top of the turntable. The pallet can now be moved with either a fork truck or pallet jack and can also be rotated to allow for load access at the back of the pallet. This allows for placing shipper pallets close to machines or walls while still providing lifter access. Painted or stainless steel turntables are available.

As loads are loaded or unloaded, the lifter now can access the product. The workstation pallet provides a safe and clean environmental alternative to plastic or wood pallets and is washable and recyclable. RonI stocks several standard sizes. Custom sizes are available to fit your application. For additional information, contact either RonI, Inc. or an authorized dealer or representative.
